

Result report StormTac Web

In this result report input and output data are compiled from simulation with StormTac Web.

3. Pollutant transport

3.1 Input data

- Yearly base flow and stormwater flow according to 1. Runoff.
- Standard concentrations for base flow and stormwater flow according to updated tables on www.stormtac.com.

Land use	Factor *
Parking	5.0
Park grounds	5.0

* Roads: factor value = traffic intensity= 0-200. Unit: x 1000 vehicles/day.

Other land use: factor value = 5 (1-10). Unit: -. 5 = standard (default) concentration value from the data base for the specific land use, 0 = minimum concentration value, 10 = maximum concentration value.

Baseflow concentration ($\mu\text{g/l}$) per land use

Land use	P	N	Pb	Cu	Zn	Cd	Cr	Ni	SS	BaP
Parking	29	960	3.6	11	47	0.041	2.5	2.2	35000	0.010
Park grounds	35	1100	0.72	4.1	8.4	0.027	0.50	1.1	12000	0.0010

Runoff flow concentration ($\mu\text{g/l}$) per land use.

Land use	P	N	Pb	Cu	Zn	Cd	Cr	Ni	SS	BaP
Parking	160	1600	20	40	140	0.45	15	6.0	140000	0.060
Park grounds	200	1200	9.0	11	35	0.30	4.0	2.0	24000	0.0084

Classification of uncertainty

High certainty

Average certainty

Low certainty

3.2 Output data

Baseflow concentration ($\mu\text{g/l}$) without treatment

	P	N	Pb	Cu	Zn	Cd	Cr	Ni	SS	BaP
Base flow concentration	35	1100	0.93	4.6	11	0.028	0.64	1.2	14000	0.0016
